We are pleased to announce the following

Special Guest Seminar

Hemodynamic Changes and Hepatic Remodeling

Yasuko Iwakiri, PhD

Associate Professor, Department of Medicine
Section of Digestive Diseases, Yale University School of Medicine

Dr. Iwakiri received her PhD in nutritional biochemistry from Colorado State University, and postdoctoral training at Yale University School of Medicine. The central focus of her lab is the study of liver fibrosis and vascular biology in liver disease pathogenesis. In recent years, her lab has been studying the effects of hemodynamic changes on liver structure and function with a focus on portal hypertension and the role of the hepatic lymphatic vascular system in liver disease. She found that these hemodynamic changes could induce hepatic fibrosis and lymphangiogenesis in the liver. Dr. Iwakiri served as an Associate Editor for the Hepatology Elsewhere section of Hepatology from 2011 to 2016 and as an editorial board member on other major Hepatology journals including Journal of Hepatology, Hepatology International and Liver International. She is a standing member of the Biomedical Research Review Subcommittee (AA-1) at NIAAA/NIH.

Friday, August 11, 2017, from 12:00 – 12:50 pm

McKibben (MCH) Lecture Hall, Room 149 - 1333 San Pablo Street, LA CA 90033

Sponsored by
The Southern California Research Center for ALPD & Cirrhosis

Keck School of Medicine of USC
